

VIA LACTEA

Description

Via Lactea is extracted in Brazil. This black granite with a subtle white veining and schist minerals add sparkle and depth to this stone. Its name describes it perfectly. The surface is as dark and mysterious as the cosmos and its veins are white like the Milky Way, producing a breathtaking effect for those who will be lucky enough to incorporate a parcel of this Brazilian jewel to their decor.

Because this stone has a lot of movement and can vary from one slab to the other, in order to manage your customer's expectations better, we recommend that you reserve your slab online and proceed with a layout approval when you place your order.
