AMELIA RIDGE

Description

Amelia Ridge, a marble-like granite, is an eye-catching masterpiece. With a rich black background, white and grey veining and hints of gold and warm browns all combine to provide a chaotic look, storm-like, that will render a stunning dramatic effect to any space. This Brazilian granite is a tribute to its country; colorful and diverse. Not only does Brazil offer its visitors a fascinating culture, but its geodiversity enables it to create a stone like the Amelia Ridge that gives a beautiful and unique piece time after time. The stone's movement seems to want to make minds wander to the wilderness of the Amazon River.

In the course of the polishing process, an epoxy resin is applied to the stone's surface to fill part of its porosity (or pores) and natural cracks that may be apparent. This has no incident on the durability, the maintenance or the beauty of the natural stone. It is possible that certain pores are too small to contain efficiently the resin, and reopen during the finishing stages. However, this does not affect the stone's quality or beauty. Such as it is the case with many natural stones, it is recommended to apply a sealer to extend its beauty through time.
