# DELICATUS

GRANITE

BRAZIL

# DELICATUS

## Description

Delicatus is extracted in Brazil, one of the largest exporters of natural stones in the world. Thanks to its geodiversity, its volcanoes and many famous wild rivers, Brazil can fulfill the needs of even the finest connoisseurs. This stone with a beige-cream background and large black-taupe quartz fragments is a dramatic-looking granite with a high degree of variation and veining.

In the course of the polishing process, an epoxy resin is applied to the stone's surface to fill part of its porosity (or pores) and natural cracks that may be apparent. This has no incident on the durability, the maintenance or the beauty of the natural stone. It is possible that certain pores are too small to contain efficiently the resin, and reopen during the finishing stages. However, this does not affect the stone's quality or beauty. Such as it is the case with many natural stones, it is recommended to apply a sealer to extend its beauty through time.

VARIATION **3**

LAYOUT

*Because this stone has a lot of movement and can vary from one slab to the other, in order to manage your customer's expectations better, we recommend that you reserve your slab online and proceed with a layout approval when you place your order.*
